

Docket No. AUS920030931US1

ABSTRACT OF THE DISCLOSURE

METHOD FOR MULTIDIMENSIONAL VISUAL CORRELATION OF SYSTEMS MANAGEMENT DATA DISPLAYING ORCHESTRATION ACTION THRESHOLD

A method, apparatus, and computer program product for monitoring the performance of a system. The mechanism of the present invention provides an interface in the form of a graphical user interface (GUI) to communicate multiple layers of system performance data to an operator. An operator monitors this display of information and uses it to determine how to adjust the system to optimize system performance. This mechanism of the present invention provides immediate feedback to an operator by displaying a trail of metric points, wherein the metric points indicate the status of system performance over a period of time. In this manner, the display mechanism of the present invention immediately conveys to an operator whether the system is operating within predefined margins, the results of performance adjustments made to the system, as well as predictions or trends for the system.
